

Compact Agile Simulation Equipment

JOINT TERMINAL ATTACK CONTROLLER / FIRE SUPPORT TEAM (CASE JTAC/FST) TRAINING

TAKING TRAINING TO THE TRAINEE

Inzpire's Compact Agile Simulation Equipment (CASE) Joint Terminal Attack Controller / Fire Support Team (JTAC/FST) training capability is designed to deliver cost-effective JTAC, FST and Forward Air Controller (FAC) training to the trainee at point of need.

The CASE system is designed and built using commercial-off-the-shelf (COTS) hardware and software that can be tailored to meet your exact training requirements. CASE JTAC/FST is software agnostic ensuring that the system delivers the necessary fidelity and operational system replication to meet the training need.

DEPLOYABLE  **RECONFIGURABLE**  **SCALABLE**  **UPGRADABLE**

Deployable

The entire CASE system is contained in ruggedised 'pelicases,' is highly portable and through the use of the latest Mixed Reality (MR) technology removes the need for expensive projected full dome visual systems.

Reconfigurable

The CASE JTAC/FST system supports a variety of real world equipment and form fit function equipment devices that replicate JTAC and FST operational equipment, tactical software and communications.

Scalable

Multiple CASE systems and other simulators can be connected together utilising DIS/HLA protocols to create networked or distributed synthetic training constellations.

Upgradable

The CASE JTAC/FST system's use of COTS hardware and software provides an easy route for upgrading and negating obsolescence.

INDIVIDUAL AND TEAM TRAINING

Inzpire's CASE JTAC/FST system can be configured to deliver individual or team/crew training to JTACs, FACs, Joint Forward Observers (JFO), pilots, FST and HQ functions.

With the capability to deliver training in complex tactical environments the CASE system provides rich levels of judgemental training to JTAC, JFO, FAC and FST operators.

Comms

Inzpire's CASE JTAC/FST products can be delivered with comprehensive comms systems including internet-enabled radios to support team, networked and distributed training.

Instructor Operating Station

The CASE JTAC/FST system can be delivered with a full Instructor Operator Station (IOS) provision allowing for the management of complex training scenarios to support judgemental training for the entire team. The system allows for the provision of pre-loaded tactical scenarios and the ability to create and edit new and existing missions as required. The IOS also provides full After Action Review functionality to support comprehensive debriefing of all mission objectives and tasks.

Form Fit Function Equipment (FFF)

Inzpire provides FFF equipment to match the operational equipment of our customer's operators all fully integrated with the CASE JTAC/FST training system.

Missions

Inzpire are working with third party software providers to MoA accredit the CASE JTAC/FST simulator system to enable full support to national JTAC training programmes.
