

World-class helicopter training, consultancy and services

Our Helicopter Services Division delivers live flying training, classroom-based tactical training, simulator expertise, and procurement and capability experience to aviation sectors in the UK and internationally.

Our experienced ex-military aircrew are drawn from across the British Army, Royal Navy and Royal Air Force and are held in the highest regard, with vast experience and expertise both in the operational and training environment.

They deliver complex, multi-faceted aviation-related contracts to a variety of safety-orientated customers including providing Wildcat flying training, Chinook Mk6 synthetic training, and supporting the European Defence Agency's (EDA) Helicopter Programme.

With thousands of hours of rotary aviation and instruction experience to draw upon, the team is made up of:

- Civilian qualified helicopter instructors, accredited by the Central Flying School;
- qualified tactics instructors;
- electronic warfare instructors;
- flight test aircrew;
- expert software engineers;
- training professionals;
- simulation experts;
- procurement experts;
- and project managers.

GROUND TRAINING

Ground training is the foundation and first building block of a successful flying training system.

Our helicopter services team delivers groundschool and helicopter tactics ground instruction to the UK armed forces and a number of European nations through the EDA, utilising the latest learning techniques to deliver immersive training.

However, ground training does not stop once the aircrew have qualified. We believe in a continuous learning process throughout the aircrew lifecycle, reinforcing basic lessons and helping individuals continue their development in order to reach their full potential.

SYNTHETIC TRAINING

As technology advances, more and more training needs to be conducted in the synthetic environment, allowing aircrew to familiarise themselves with increasingly technical aircraft.

We have a wealth of experience in delivering individual and collective training using simulator devices; whether it be our own simulators, or those owned by other companies. Our expertise across a broad spectrum of systems - including providing Chinook Mk6 training at RAF Odiham and synthetic training support to the EDA - means our knowledge is adaptable to all aspects of rotary aviation.

Our expertise ultimately enables us to develop, plan, deliver and debrief realistic training to meet our customers' operational priorities.

LIVE FLYING TRAINING

Helicopter flying training is undeniably costly; therefore getting it right first time, every time, is the only route to success.

Using experienced ex-military operators equipped to work in the most high-pressured of situations, we provide bespoke, scalable training solutions.

Able to effectively support military, emergency service or civilian clients globally, our operationally experienced instructors deliver tactical live flying training designed specifically to suit each customer's needs. They currently deliver conversion to type and conversion to role training on the Wildcat helicopter platform and have extensive experience delivering on Apache.

CONSULTANCY

Our project managers and procurement experts have worked on all areas of capability within the aviation sector.

Inzpire's aircrew are tactical experts and can support customers in analysing the strengths, weaknesses and potential threats with any aircraft type.

CLASSROOM-BASED HELICOPTER TACTICS TRAINING

Designed by tactics instructors with unparalleled operational flying experience, our tactical helicopter training uses up-to-date inputs from current global operations to enhance our customers' understanding of the battlespace.

Our 'Tactical Air Operations Course' and 'Composite Air Operations - Supporting Helicopters Course' are both packed with all of the critical information required to improve students' knowledge of tactical helicopter operations.

The courses can be delivered at a location to suit the customer, and can be adapted to suit audience requirements with a range of theory and practical modules being available.

FROM TRAINING TO CONSULTANCY, WE ARE HERE TO HELP.

Whether you are in the UK or elsewhere in the world, our helicopter services experts are on hand to help with maximising the capabilities of both your aircrew and your aircraft.
