

WE ARE INZIPIRE

Why does Inzipire exist?

Inzipire exists to ignite a revolution of honour, integrity, trust and excellence in the defence-industrial environment. We believe that our financial success is a by-product of this higher purpose. For us, our purpose is everything and our success flows from a life well lived. Our 2035 vision is to become the most trusted and respected defence company on earth.

How does Inzipire compete?

We deliver excellence. In our full-time team, we have several thousand years of frontline, high-end, military experience. Our breadth of knowledge is enormous and this allows us to deliver true excellence to UK and overseas customers - in products, training and technical/consultancy services, to both military and civilian customers. We are a preferred UK military 'whole force' partner in all our operating areas.

What does Inzipire do?

We make the world-leading GECCO family of mission systems, we train UK and international armed forces, and we have vast experience in training and consultancy in areas including intelligence, unmanned systems, human performance, cyber, maritime and electronic warfare.

We have an enviable reputation, potent capabilities, outstanding employees and immense ambition.

TECHNICAL SERVICES

Inzpire's technical services are delivered by the very best ex-military personnel, all with relevant recent operational experience.

Within the UK, Inzpire's technical services experts are integrated into service commands, delivery teams and Ministry of Defence headquarters, working as one with their service colleagues.

Their expertise in research and development, concept development and programme and requirements management also has far-reaching applications in civilian industries and is already being applied in areas such as environmental analysis.

We provide continuity, experience and technical knowledge which supports customer output and can immediately deliver within complex programmes.

Our expertise includes:

- Equipment capability development and assessment
- Integrated test, evaluation and acceptance plans
- Mission data
- Electronic warfare
- Concept development
- Programme and requirements management
- Strategy development
- Quality management

Since 2006, Inzpire has been entrusted with developing various equipment and capabilities for the UK Typhoon programme. Our experts have worked closely with requirements managers to write the concept of employment (CONEMP) for the platform. As well as working side-by-side with requirements managers, Inzpire also provides its own requirements managers to the UK MoD in areas such as complex weapons systems, various aircraft platforms and specialist IT systems.

In 2018 Inzpire was tasked with writing the initial operational capability acceptance case report for the RAF's latest 5th generation fighter - the Lightning F-35B. As independent auditors of the Lightning delivery programme, Inzpire delivered an honest, objective and candid assessment.

When working with our customers to develop and improve capabilities, our team draws on skills honed during years of operational front line experience. Our output is only ever what we would be comfortable with using ourselves.

TRAINING

With experience in synthetic, live and classroom-based training across air, land and maritime, our experts design and deliver training which meets all of our customer's learning objectives.

All of our training staff have the highest professional qualifications and our team includes multiple qualified weapons instructors who work alongside electronic warfare, ISR and qualified gunnery instructors.

Our training experts create long-lasting partnerships with our customers. We have delivered life-saving collective training to international customers since 2007 and human factors training to Royal Air Force aircrew since 2008.

We have extensive live flying training expertise and our operationally experienced qualified helicopter flying instructors teach all aspects of the Wildcat Battlefield Reconnaissance Helicopter Conversion to Type courses at RNAS Yeovilton.

In the maritime domain, we have delivered live red air serials during Exercise STRIKE WARRIOR; had personnel embarked on HMS QUEEN ELIZABETH; and supported the delivery of live firing training during Exercise SHARPSHOOTER 2022.

Inzpire's Training Academy provides flexible and adaptable training for military and civilian customers using face-to-face, virtual and blended learning. The courses available through the academy have been designed and developed as a result of customer research and carefully targeted training needs and gap analysis.

We provide a full suite of beginner, intermediate and advanced courses in:

- Air operations
- Air-land integration
- Cyber operations
- Electronic warfare
- Human factors and performance
- Intelligence and analysis
- Intelligence, surveillance and reconnaissance
- Intelligence, surveillance and reconnaissance sensors
- Space operations
- Tactical helicopter training
- Uncrewed air operations

Inzpire is an ISO 9001:2015 accredited organisation and we have been recognised for our quality management and continuous improvement in developing high integrity training systems. We provide an array of training services, including training analysis, assurance and auditing.

PRODUCTS

Targeted Fidelity Simulator

Our Targeted Fidelity Simulator (TFS) delivers training solutions across a broad spectrum of capabilities and platforms including helicopters, fixed-wing aircraft, RPAS ground control stations and forward air controller environments.

Featuring accurate sensor, weapons and cockpit emulation, the TFS provides a cost-effective yet immersive training solution. We use commercial-of-the-shelf products and providers which ensures that we can deliver innovative solutions using the most up-to-date and appropriate systems and software.

The ability to network multiple simulators means that linked and distributed training is easily achievable, enabling team and collective training in multi-platform operations.

Compact Agile Simulation Equipment (CASE)

With personnel deployed on operations across the globe, maintaining currency and competency cannot always be met by the traditional model of simulators housed in large complexes.

The CASE family of simulator systems has been designed to improve access and availability of synthetic training, mission rehearsal and mission assurance for operators and commanders. CASE simulator systems are light, portable and deployable by design. They are designed to be 'hand' carried to allow training to be taken to the trainee - wherever they may be.

With JTAC, ISR and rotary variants available our CASE simulator systems provide cost-effective, deployable, reconfigurable, scalable and upgradable synthetic training whatever the requirement.

GECO Mission Support System

The GECO Mission Support System has been developed by aviators, for aviators, and provides the most intuitive and highly capable air mission support system currently available on the military market.

Comprising an off-board ground-based mission planning system and an on-board tablet-based electronic flight bag, GECO provides support for the whole mission cycle through planning, rehearsal, mission execution and debrief.

The mission planning element provides a multi-platform solution, enabling an entire military force to benefit from a single, interoperable system.

The GECO electronic flight bag delivers a range of features to provide airborne situational awareness. The device provides many user-friendly capabilities including navigation for tactical routes, IFR flight plans, display of tactical overlays and the plotting and display of surface threats.

GECO is in use on over 20 different fast jet, helicopter and multi-engine platforms around the world and has been used operationally by crews in Iraq, Afghanistan, Libya, Syria and Africa.
